COMPUTER PROGRAMMING
LAB 1

LAB TITLE
Installation of DEV-C++ IDE and Running the First C++ Program

---

1. OBJECTIVE

The purpose of this lab is to understand how to install the DEV-C++ Integrated Development Environment (IDE) and execute a basic C++ program. In this lab, students learn the process of creating, compiling, and running a simple C++ program using DEV-C++.

---

2. THEORY

C++ is a popular programming language that is widely used for software development and engineering applications. To write and execute C++ programs, programmers normally use an Integrated Development Environment (IDE).

DEV-C++ is a user-friendly IDE that helps beginners easily write, compile, and run programs. It provides different tools such as a code editor, compiler, and output window in a single environment.

Every C++ program starts from the **main()** function, which is the entry point of program execution. The **cout** statement is used to print or display output on the screen.

---

3. SOFTWARE

- DEV-C++ IDE
- C++ Compiler (included with DEV-C++)

---

4. PROCEDURE / PROCESS

Step 1: Install DEV-C++

1. Download DEV-C++ from its official website.
2. Install the software on the computer.
3. Launch DEV-C++ after the installation is completed.

Step 2: Create a New C++ Program

1. Click **File → New → Source File**.
2. A new blank editor window will appear.
3. Click **File → Save As**.
4. Save the file with the name **lab1_hello.cpp**.

Step 3: Write the First C++ Program

```
#include <iostream>
using namespace std;

int main()
{
    cout << "Hello World!";
    return 0;
}
```

Step 4: Compile and Run the Program

1. Click **Execute → Compile**.
2. Then click **Execute → Run**.
3. The output window will show the result of the program.

GitHub Task

In this lab, students also learned the following:

1. How to create a GitHub account.
2. How to create a repository named **Cpp-Lab-Tasks**.
3. How to upload the file **lab1_hello.cpp**.
4. How to share the repository link with the instructor.

Conclusion

In this lab session, we learned how to install the DEV-C++ IDE and write our first C++ program. We also practiced compiling and running the program successfully. In addition, we learned how to upload our lab files to GitHub for submission and future reference.
